

# Monash/C2Zero Real Carbon Price Index

Fact sheet | 29 Nov 2024

The Monash/C2Zero Real Carbon Price Index (RCPI) provides a weighted composite measure of the physical price of carbon<sup>1</sup> across all jurisdictions based on mandated carbon prices set by regulators and governments.

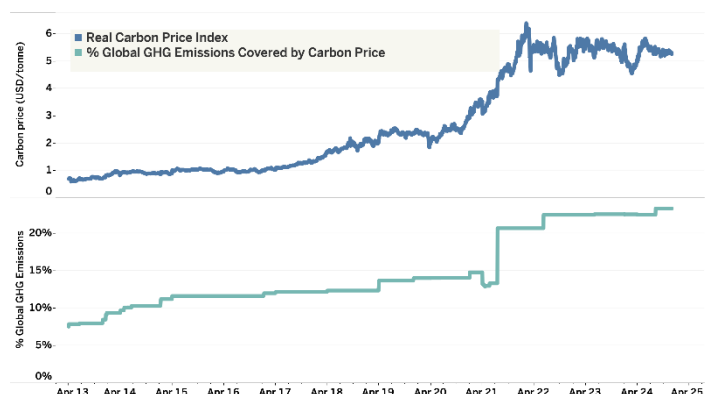

The RCPI covers national, subnational and regional jurisdictions implementing a carbon tax or carbon emissions trading schemes (ETS)<sup>2</sup> and jurisdictions with no mandatory carbon price – the latter being counted in the index using a price of zero.

The RCPI enables an overall global carbon price and price history to be determined, reflecting the global value of carbon.

The RCPI started in April 2013, covering 20 jurisdictions, accounting for 7.88% of global GHG emissions. As of August 2024, it covered 70 jurisdictions, accounting for 23.35% of global GHG emissions.

## Historical Index Value

(April 2013 - November 2024)

## Highlights

- In the past month, RCPI has slightly moved despite the noise surrounding the US elections and the COP29 in Baku.
- The markets moved in opposite directions with the EU ETS and Guangdong pilot ETS showing an increase which was offset by the decline in China National ETS, Korea ETS and California CaT, which ended up balancing each other.
- The COP 29 in Baku did not have a significant impact on the RCPI.

<sup>1</sup> It refers to carbon dioxide equivalents or CO<sub>2</sub>e.

<sup>2</sup> As of August 2024, 70 national, subnational and regional jurisdictions implemented a carbon tax or ETS. The RCPI covers all 70 of those jurisdictions.

<sup>3</sup> The return is calculated as the annualised price change from April 2013 to December 2013.
